Request and Decision Summary

	Submitted By	Area Affected	Type of Request	User Impact	Document Title
01	David Wright	Commons	Defect	Very High	CCB_4_29_2004_item1
	<p>Request: A bug was found late in the testing cycle for the emergency CCB to eliminate the display of the e-application for F and some K awards. This bug only affects new CGAP applications, which are not currently present in production. Therefore, this bug was deferred. This CCB is requesting that this fix be added to the 2.6.4 release of Commons, but get propagated to test as soon as possible to facilitate CGAP testing.</p> <p>Decision: Withdraw request.</p> <p>Notes: Duplicate request. Do not need to do.</p>				
02	David Wright	Commons	Defect	Very High	CCB_4_29_2004_item2
	<p>Request: Commons and Commons Demo are rebooted every night because of a memory leak which has been unresolved since inception. Through extensive analysis we believe the issue is related to a rogue thread creation step in FSR. We propose to fix this code to be more inline with project development standards (Reference CQ18055). This is to be done in the 2.6.4 maintenance release of Commons.</p> <p>Decision: Approved</p> <p>Notes: This request is in regard to finding and fixing the code that is causing the memory-leak problems. The fix is in integration testing and if the results are positive, the fix would be in the June release. A reproducible case has been identified that can be used in testing. Jim Tucker and Kalpesh Patel will work together to test this.</p>
